Question of the Day

(QOD): Collaborative Decisions

Answer for QOD:

Our team made collaborative decisions by establishing strong communication between our designer and supplier so that the former could ensure the design he produced was feasible for the builder. We also discussed in our 5-minute meeting my plan for the program and what sensors I would need to ensure they made it into the design as well. We all brought up problems that needed to be solved, like how wheels rolling on carpet may veer off course, and brainstormed solutions together (using a gyro sensor). This kept everyone on the same page.

Summary of Major Events from Today

We completed 75% of the robot design and purchased almost all required materials. Jack worked on our presentation while waiting to build and I coded robot movement and motion sensing and began to add code for color sensors.
